RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 60 pages. Original publisher: Hampton, Va. : National Aeronautics and Space Administration, Langley Research Center, 1990 OCLC Number: (GPO)apn1992-042706 Excerpt: . . . i. e. where $G = 2G_b - 0. G = 1 - G_A$ numerical solution to (2. 10a) using a Runge-Kutta method shows that this occurs when $7 - \dots - 1. 971510$, in which case -. 993934 (3. 7) The corresponding real value of and is obtained by integrating (3. 4) from 0 to $7 - \infty$ with an appropriate treatment at the generalised inflection point. Such a calculation predicts that the neutral value of and is and 0. 645065. (3. 8) However, of greater significance are the unstable eigenmodes. Figure (3. 1) illustrates the dependence of the growth rate, t , on the real wavenumber and . We see that the growth rate attains its maximum value of 0. 256853 at and 0. 143619; further it turns out that the acoustic modes have smaller growth rates (see below) so that this is the most unstable inviscid mode for a hypersonic boundary layer. In Figure (3. 2) we show the eigenfunction of the...
