If the urine is not clouded with pus but contains shreds of cast-off cells, it indicates that the disease has passed from the acute to the chronic stage. TREATMENT OF GOXORKUEA IX TnE MALE. Usually no symptoms of gonorrhoeal infection appear until several days after it occurs, then for two or three days a thin mucous discharge appears from the urethra. After this time the discharge may turn to a creamy yellow pus, and the disease may reach a very painful stage. During the height of the inflammation, treatment should consist of rest in bed when possible. As soon as the tenderness begins to subside, treatment with germicidal solutions may be employed. Many agents are used, and the number and frequency of application vary with the different agents. Acriflavine, one of the dye products, when administered daily is retained in the urethra for five minutes. Argylol or protargol, silver derivatives, or permanganate of potash may be used several times daily. Only a physician experienced in the treatment can determine the strength to be used, the frequency of application, and the length of time that the treatment should be continued; but the social worker can be of great assistance in urging the patient to continue treatment until cure is complete, in warning him against quacks and self-medication, in educating him to follow directions,...
