Reviews

A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.

Forgotten Books, United States, 2016. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Notes on Heating and Ventilation The chapters comprising this book are a brief resume of the lectures delivered by the author to the classes in heating and ventilation at the University of Michigan. The subject matter was first published as a series of articles in Domestic Engineering. The book has been written primarily for the steamfitter and designer of heating systems. It presupposes a knowledge of the construction and operation of the simpler forms of heating systems and has been reduced to as brief a form as possible so that the reader can readily find the notes or data desired. The design of heating and ventilating systems has not been reduced to an exact science. The factor of judgment and experience in designing heating plants is a large one. One reason for this is the lack of exact experimental data governing some of the most important factors entering into these calculations. This lack must be filled from the designer s experience. The tables of heat losses from radiating surfaces and the tests of pipe coverings have been compiled from the results obtained from the experiments made under the direction of Prof. M. E. Cooley, Dean of the Department of Engineering, University of Michigan. The author also has shown illustrations of tunnel sections which have been used by Prof. Cooley in the design of a number of central heating systems.
